

# High enthalpy geothermal resources of Greece for power generation & district heating

**D.Mendrinou, G.Choropanitis, O.Polyzou, C.Karytsas**

*Centre for Renewable Energy Sources and Saving*

*December 2011*

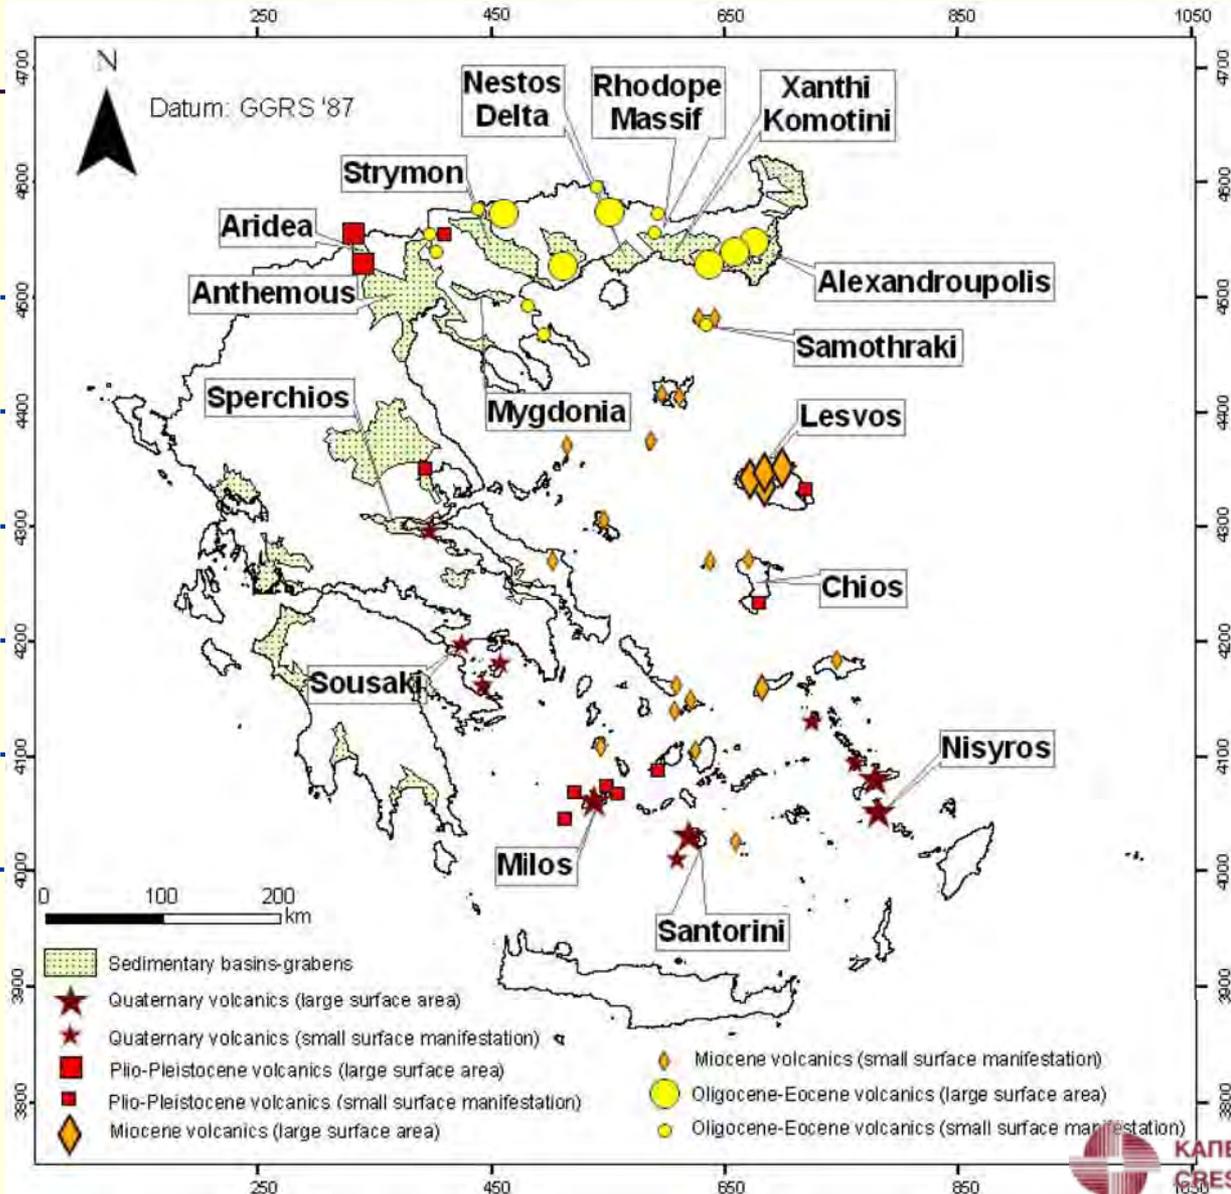

# Geothermal fields & volcanic activity in neighboring countries

	Geothermal fluid temperature	Age of volcanic rocks
Italy, Tuscany	350 °C	Pliocene <i>(1.8 – 5.3 million years)</i>
Turkey	170 °C	Oligocene <i>(23.8 – 33.7 million years)</i>

# Volcanic rocks in Greece

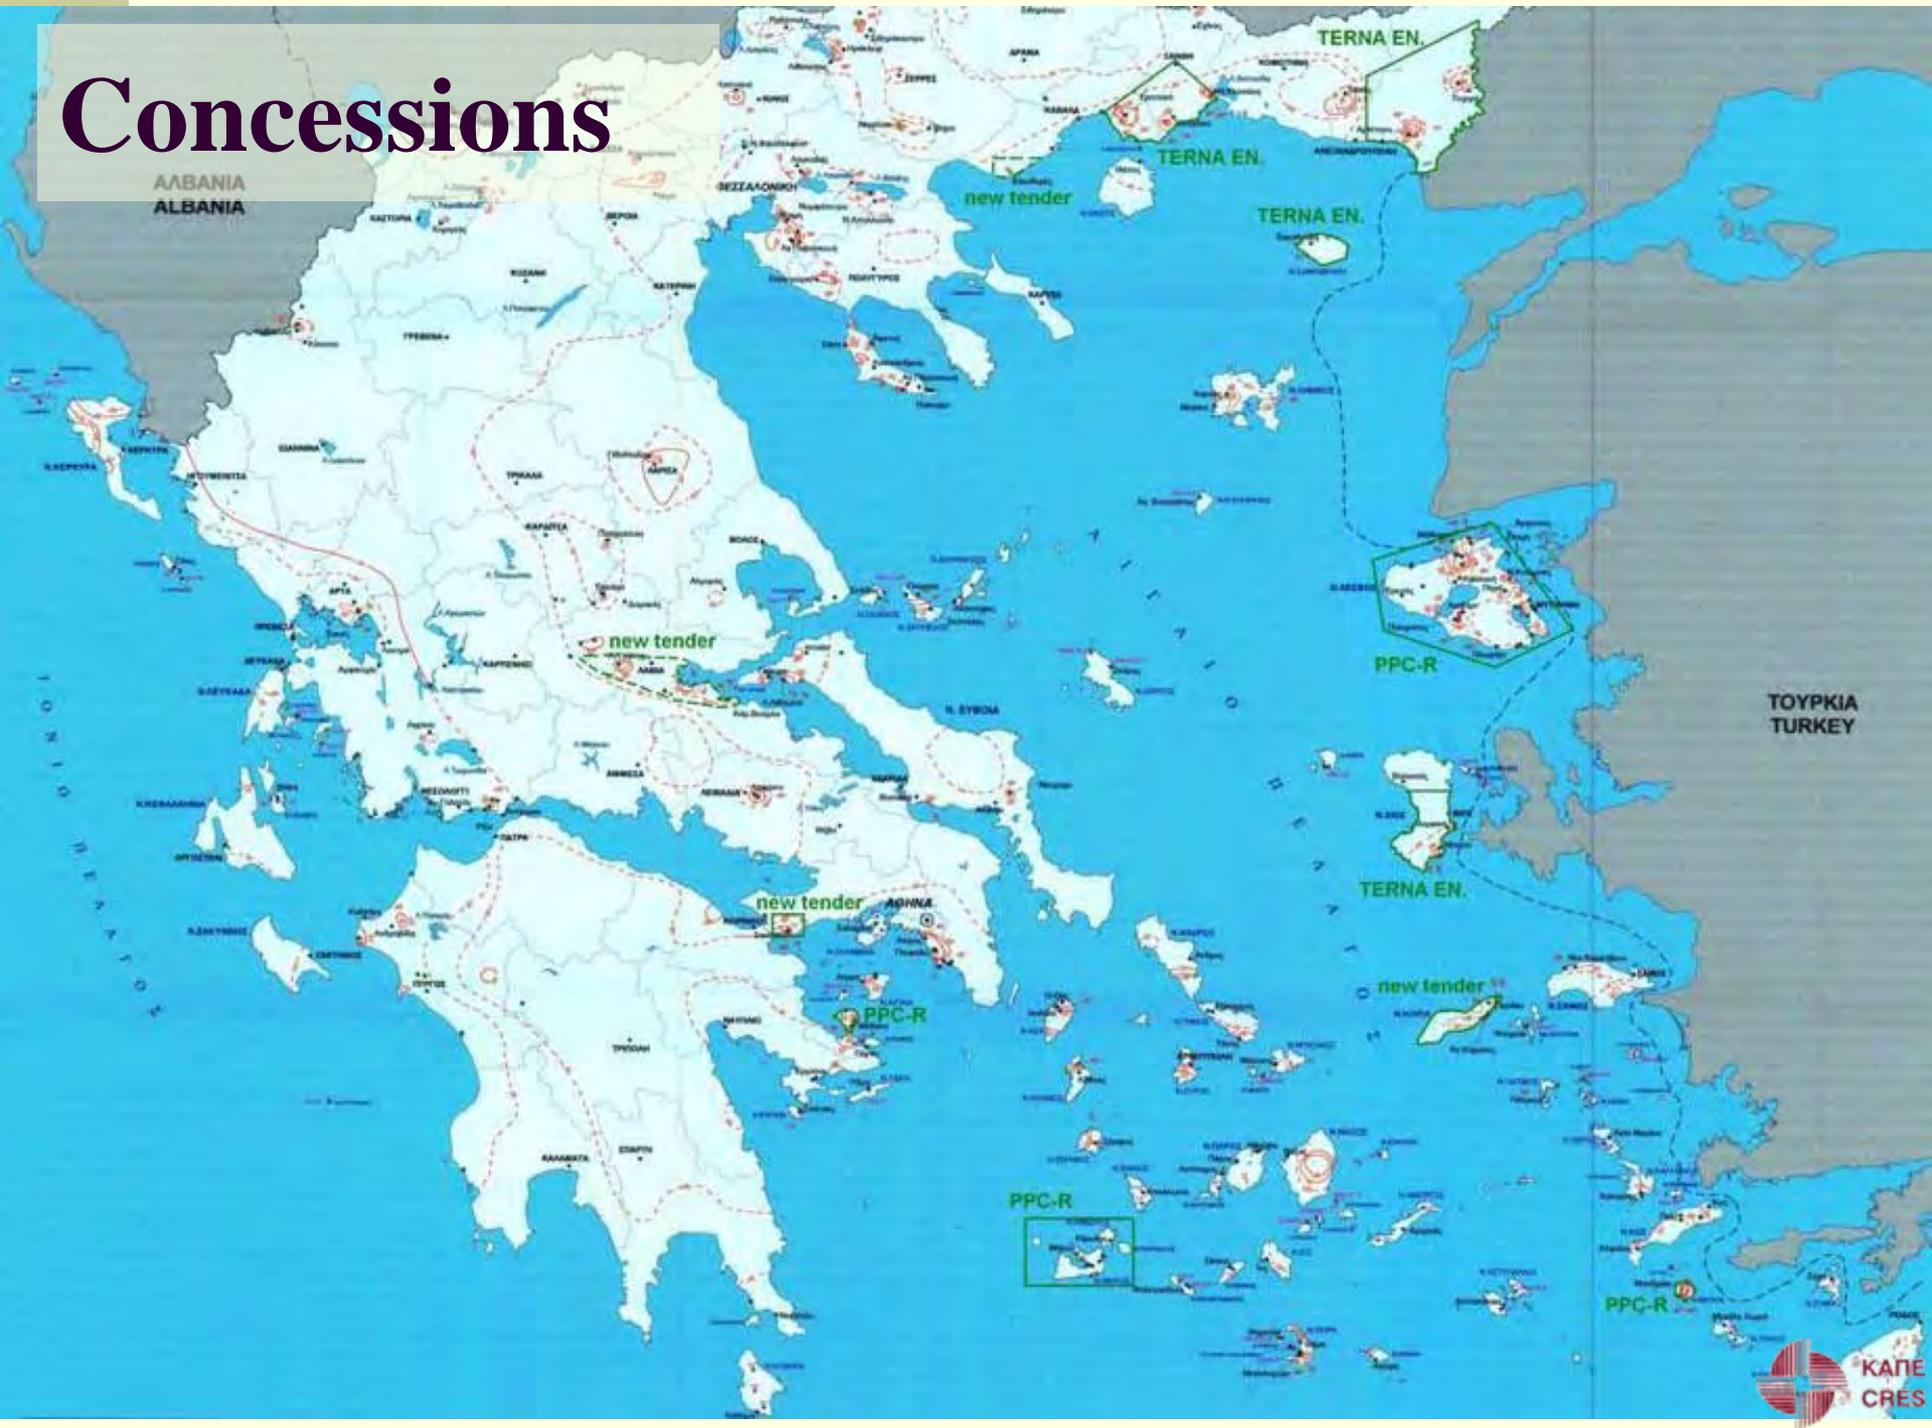

## Years

- 0 ----- Quaternary
- 1.8 M ----- Pliocene
- 5.3 M ----- Miocene
- 23.8 M ----- Oligocene
- 33.7 M ----- Eocene
- 54.8 M -----

# Concessions

# Milos island

local electricity demand

PPC: 7 MWe

S & B: 7 MWe

five deep wells  
depth: 1 – 1.4 km  
T = 300-320 °C

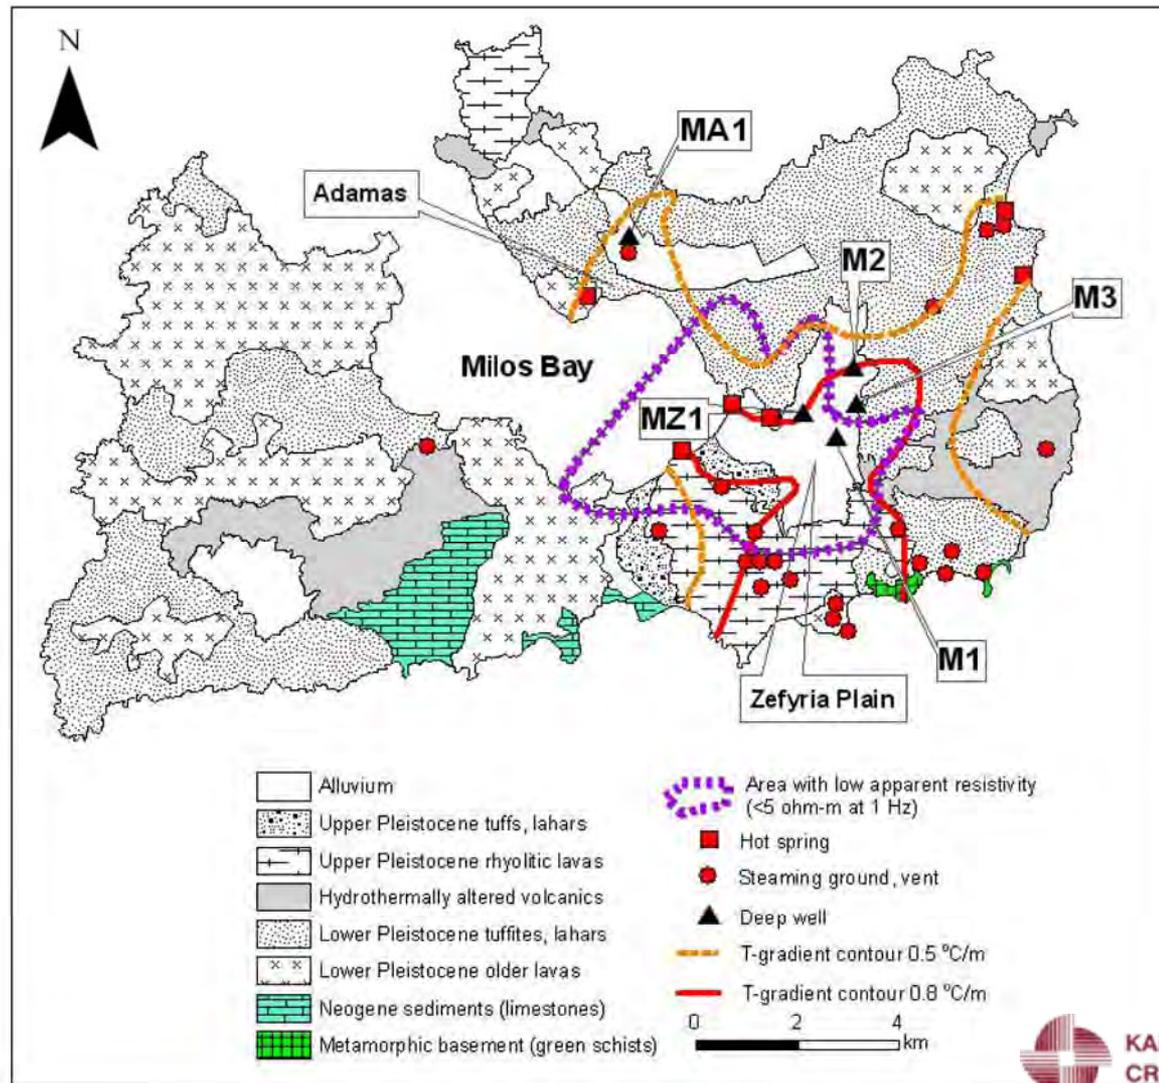

&

Geophysical exploration

Geothermal reserves

150 MWe  
Justified for development

# Nisyros island

two deep wells  
depth: 1.5 – 2 km  
T = 250-350 °C

&

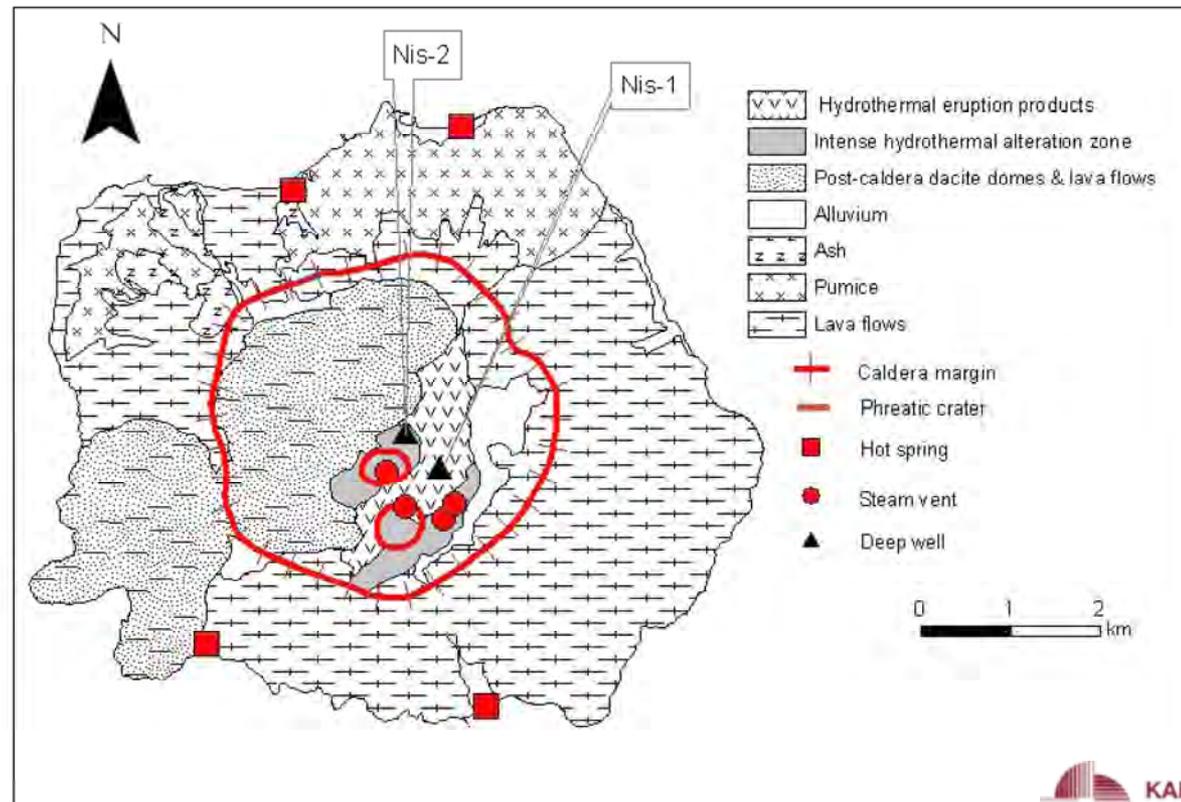

Geophysical exploration

Geothermal reserves

50 MWe  
Justified for development

local electricity demand  
Nisyros: 5 MWe  
Kos: 60 MWe

# Lesvos island

wells

depth: 0.2-1.4 km

T = 80-104 °C

&

geothermometer

K/Mg/Na

Argenos ⇒ 127/217 °C

Thermie ⇒ 110/175 °C

MI=2.03-2.14

&

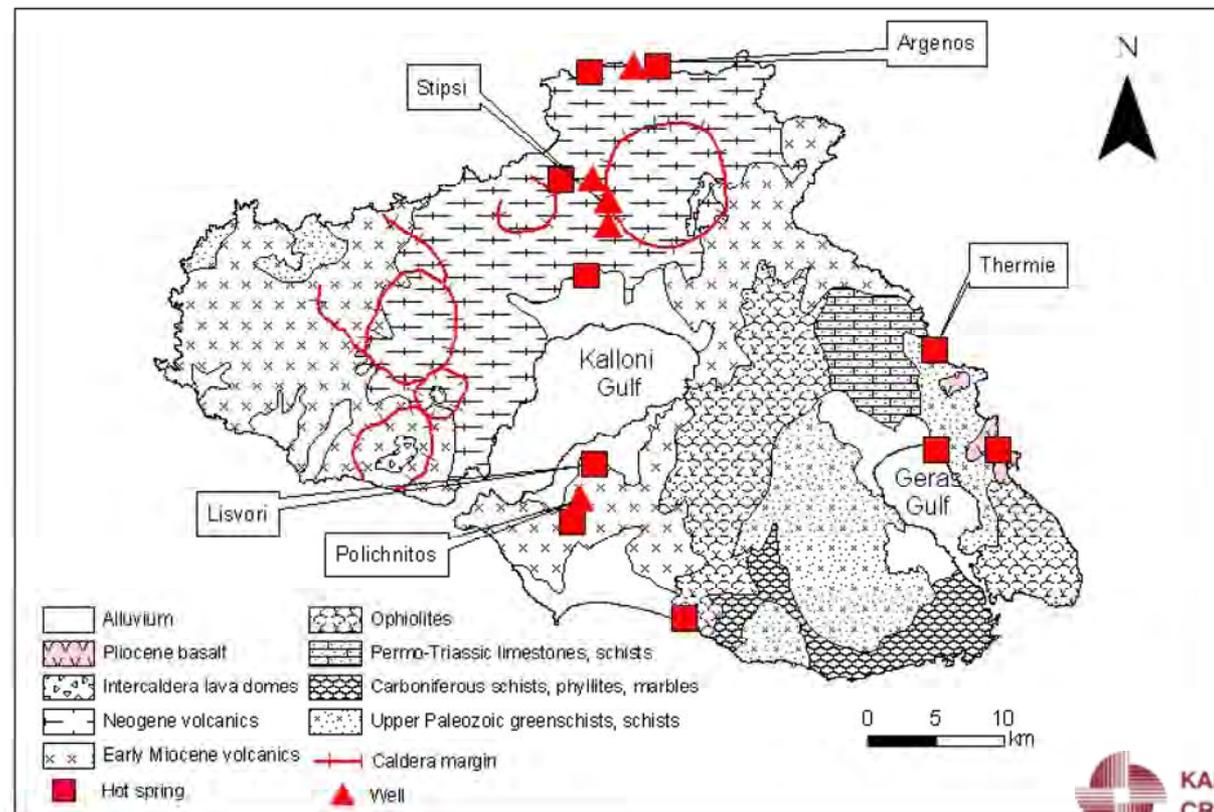

3D-MT survey

Geothermal prospect

local electricity demand

50 MWe

# Methana Peninsula

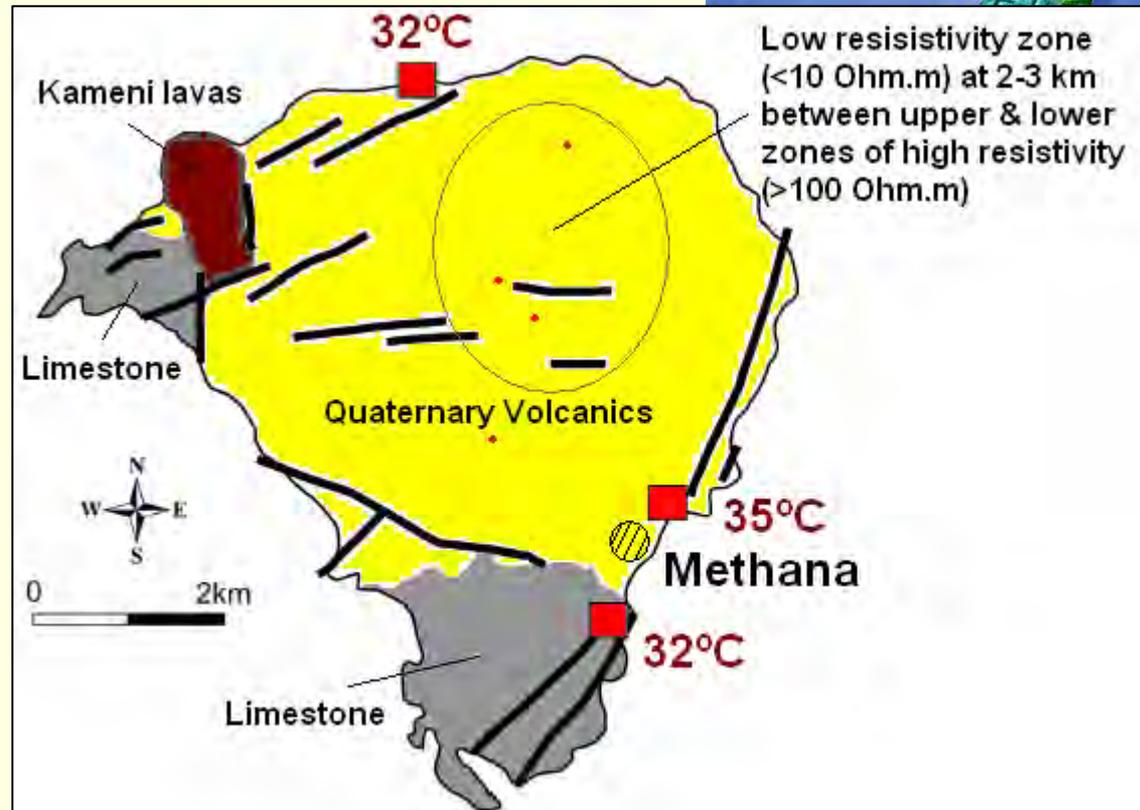

Active volcano  
Springs  
32-35 °C  
geothermometer  
K/Mg/Na  $\Rightarrow$  110/190 °C  
MI=2.07

&

Geothermal lead

# Santorini island

wells  
depth: <0.5 km  
T = 65 °C

local electricity demand  
25 MWe

&

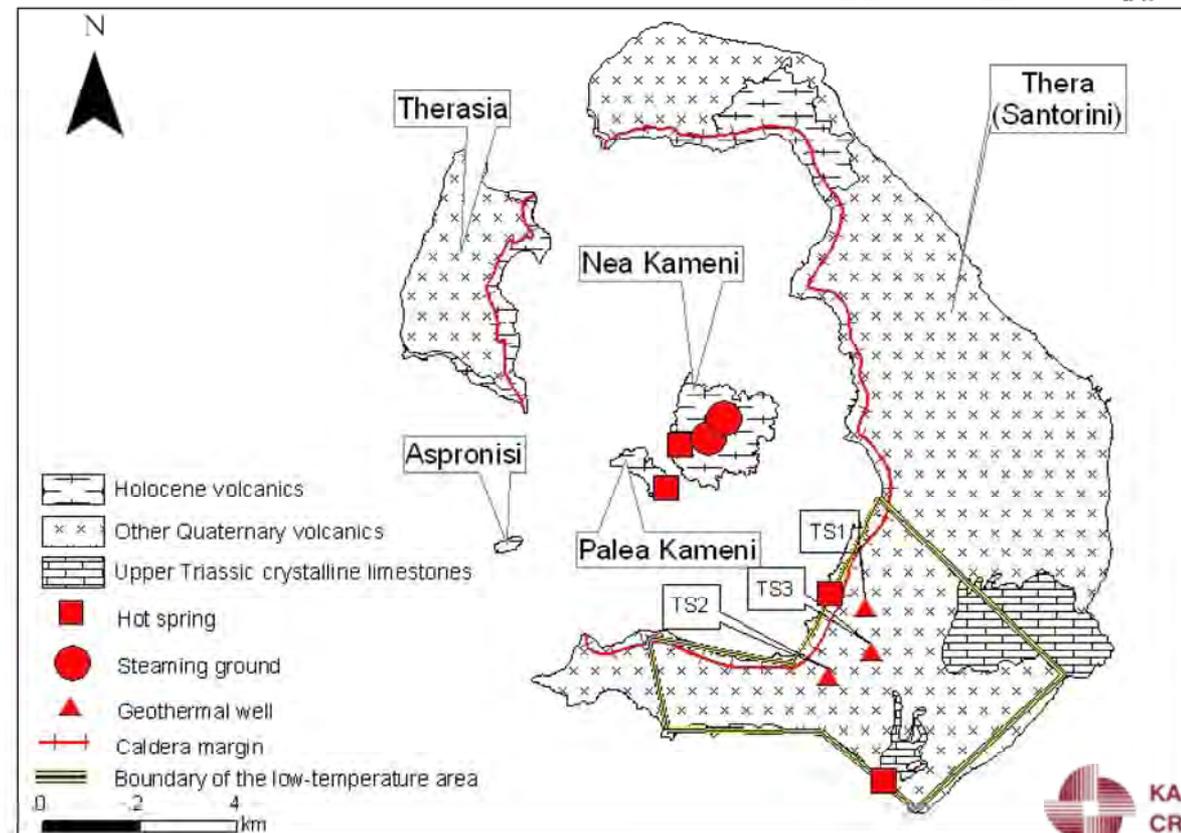

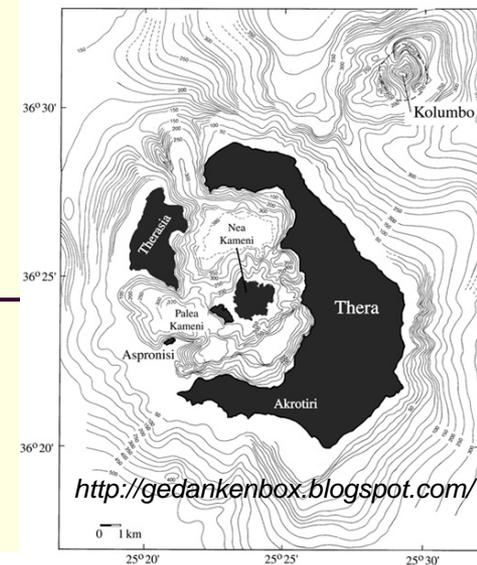

Active volcano  
Fumaroles  
⇒ >100 °C  
geothermometer  
K/Mg/Na ⇒ 110/174 °C  
MI=2.14

&

Gravity mapping

Geothermal lead

# Kos island

Quaternary volcanic products from two submarine volcanoes

Hot spring

45 °C

geothermometer

K/Mg/Na  $\Rightarrow$  110/190 °C

MI=2.07

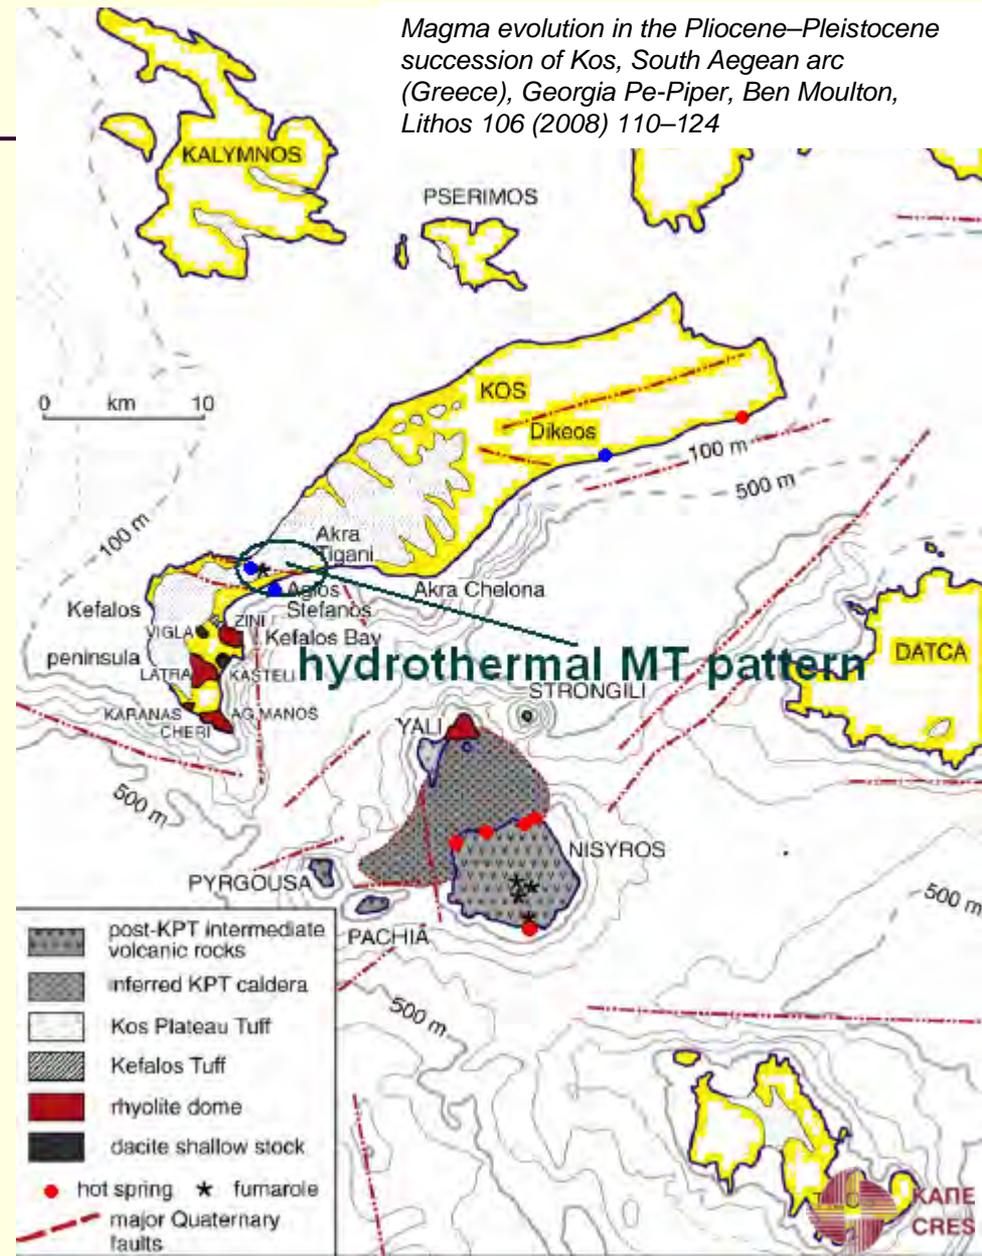

&

2D-MT survey

local electricity demand

60 MWe

Magma evolution in the Pliocene–Pleistocene succession of Kos, South Aegean arc (Greece), Georgia Pe-Piper, Ben Moulton, Lithos 106 (2008) 110–124

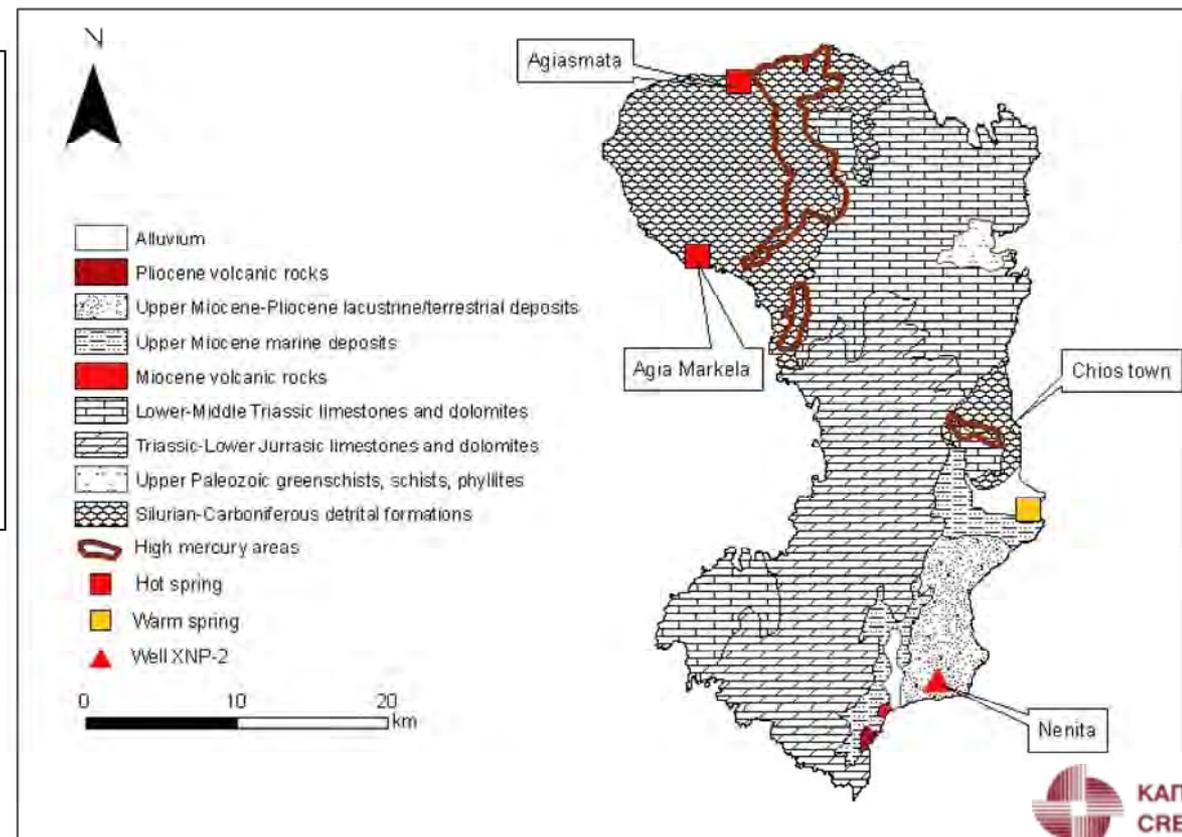

# Chios island

wells  
depth: <0.5 km  
T = 80 °C

local electricity demand  
40 MWe

geothermometer  
K/Mg/Na

Agiasmata  $\Rightarrow$  150/245 °C  
Ag.Markela  $\Rightarrow$  140/215 °C  
Nenita  $\Rightarrow$  150/210 °C  
MI=2.06-2.27

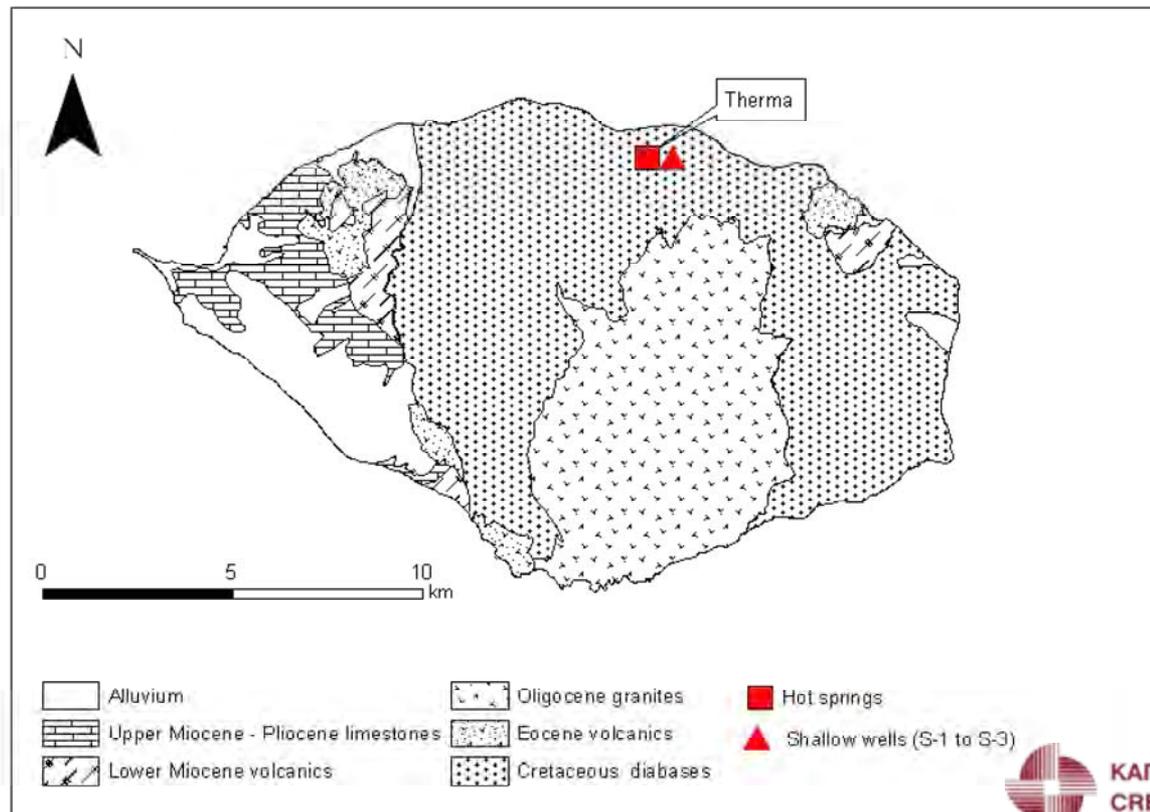

# Samothraki island

wells  
depth: <0.1 km  
T = 100 °C

local electricity demand  
5 MWe

geothermometer  
K/Mg/Na

Therma ⇒ 170/250 °C  
MI=2.21

# Ikaria island

Miocene to Pliocene  
granodiorite

springs

$T = 43-59\text{ }^{\circ}\text{C}$

Heat flow  $>5\text{ MW}_{\text{th}}$

local electricity demand

Ikaria : 10 MWe

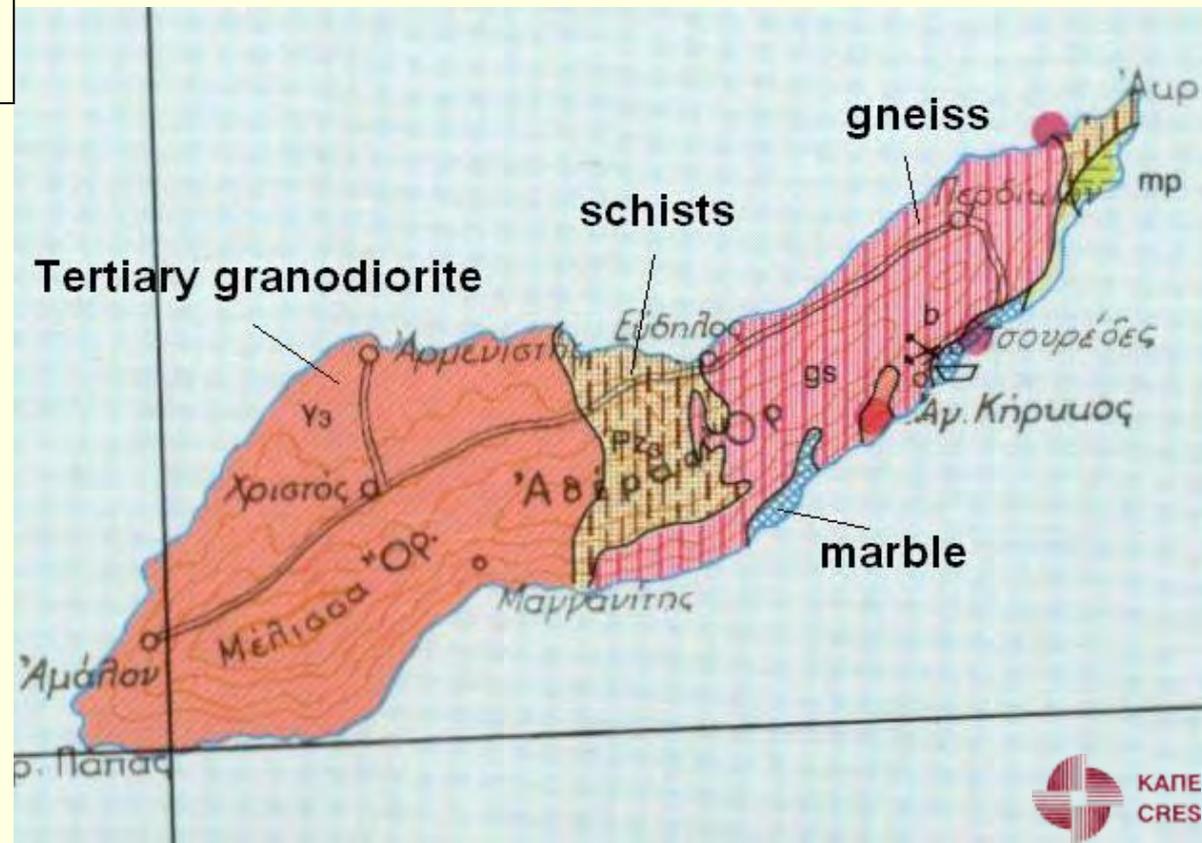

Samos: 65 MWe

geothermometer

K/Mg/Na

Therma  $\Rightarrow 110/180\text{ }^{\circ}\text{C}$

MI=2.13

# South Evros

## thermal wells

Βάθος: <0.5 km  
T = 50-85 °C

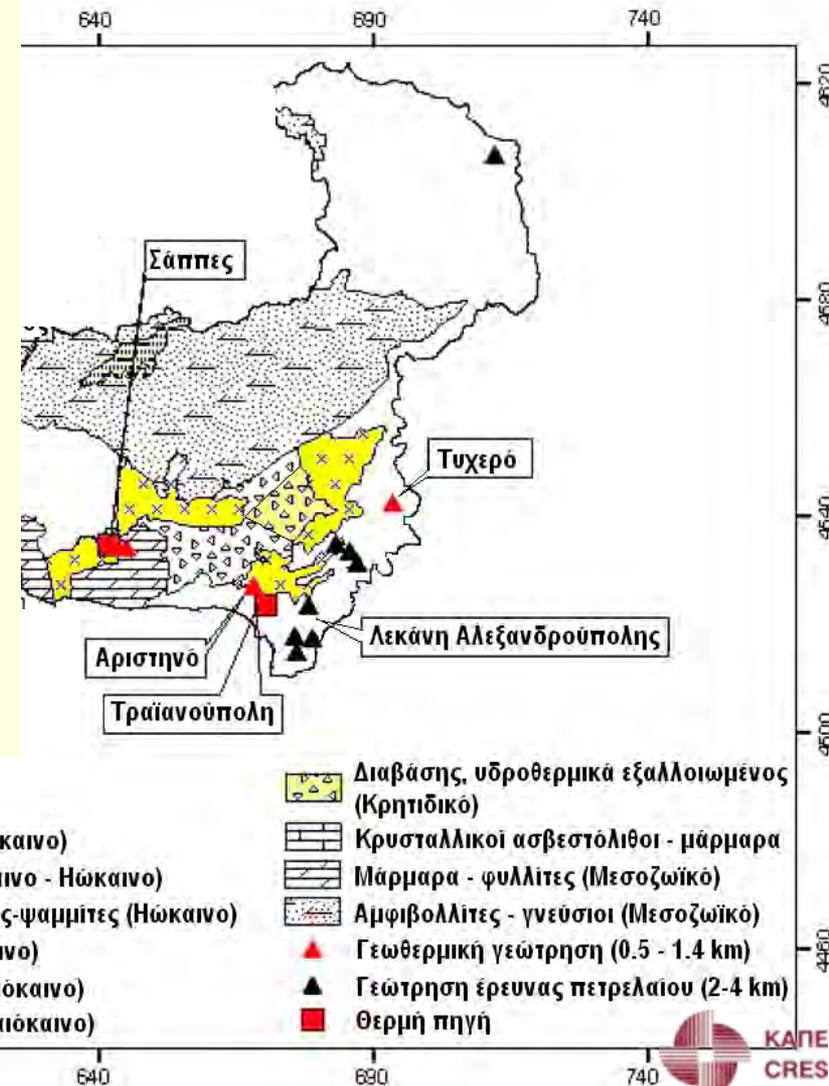

## geothermometer

K/Mg/Na

Aristino ⇒ 125/180 °C MI=2.44  
Trainoupolis ⇒ 135/190 °C MI=2.26  
Tycherο ⇒ 60/135 °C MI<2  
Sappes ⇒ 115/235 °C MI<2

## deep wells

Evros basin  
depth: 3-4 km  
T = 100-140 °C

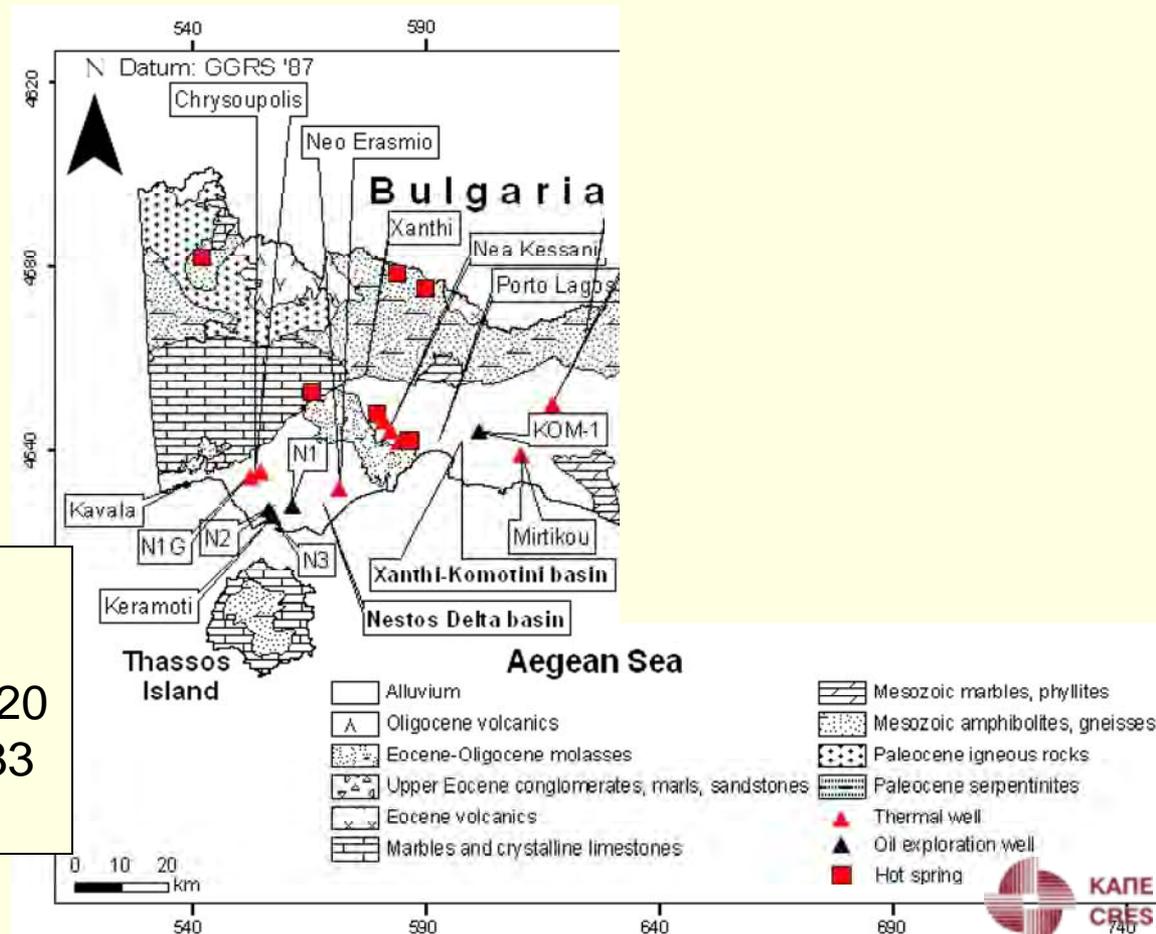

# Delta Nestos – Porto Lagos

thermal wells  
depth: <1 km  
T = 60-80 °C

deep wells  
**Keramoti**  
depth: 3-4 km  
T = 120-165 °C  
**well N1G**  
depth: 1.4 km  
T = 120 °C

geothermometer  
K/Mg/Na  
Chrysoupolis ⇒ 80/125 °C MI=2.20  
N.Erasmio ⇒ 160/210 °C MI=2.33

# Strymon basin - Mygdonia graben

## thermal wells

depth: <0.5 km

Agistro: 50 °C

Sidirokastro: 75 °C

Iraklia: 60 °C

Nigrita: 65 °C

Achinos-Ivira: 35 °C

Akropotamos: 90 °C

Nea Apolonia: 55 °C

Langadas: 40 °C

## geothermometer

K/Mg/Na

Agistro ⇒ 55/175 °C MI<2

Sidirokastro ⇒ 100/300 °C MI<2

Iraklia ⇒ 80/190 °C MI<2

Nigrita ⇒ 90/280 °C MI<2

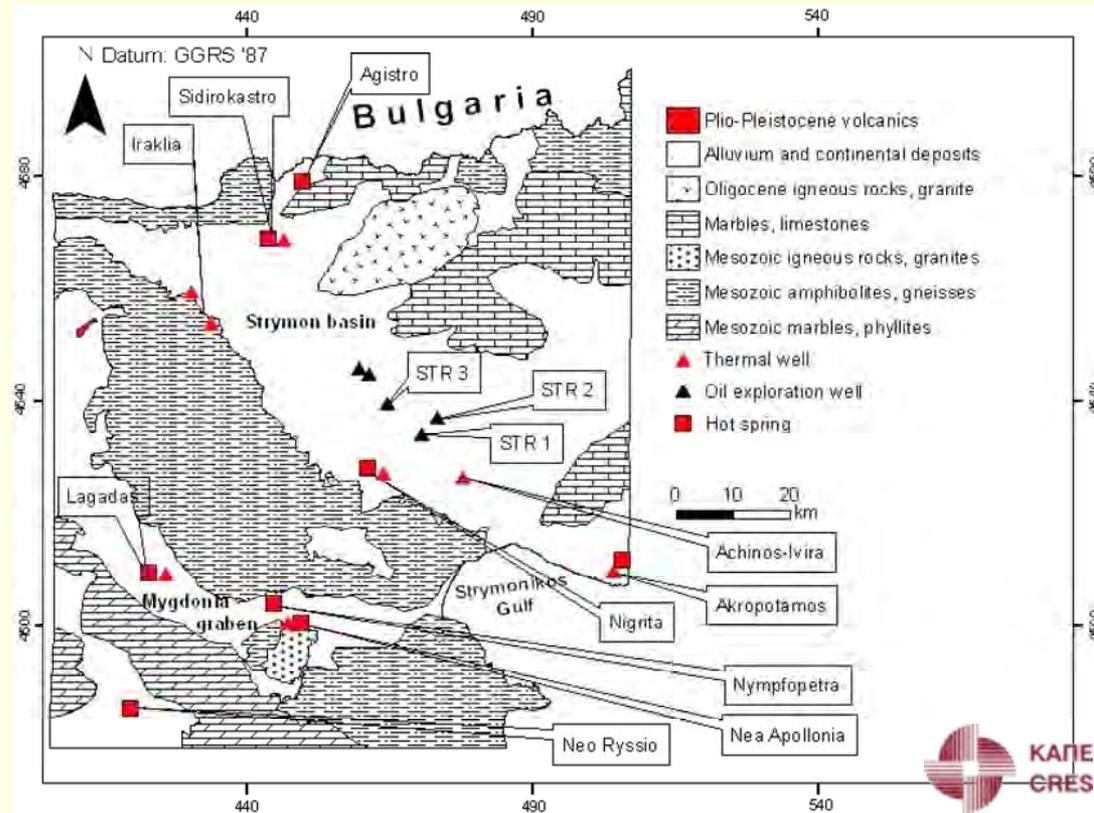

Akropotamos ⇒ 110/250 °C MI<2

Nea Apolonia ⇒ 80/155 °C MI<2

## deep wells

depth: 2.7-3.7 km

T = 90-135 °C

# Sperchios-N.Evoikos graben

Aidipsos: 81 °C

Gialtra: 50 °C

Kamena Vourla: 46 °C

Thermopylae: 44 °C

Loutra Ypatis: 32 °C

Loutra Platystomou: 34 °C

geothermometer

K/Mg/Na

Aidipsos  $\Rightarrow$  120/175 °C MI=2.25

Thermopylae  $\Rightarrow$  105/180 °C MI=2.04

Kamena Vourla  $\Rightarrow$  100/190 °C M<2

Loutra Ypatis  $\Rightarrow$  95/230 °C M<2

# Development prospects

---

## Milos & Nisyros

- Field development & power plant construction can start immediately
- Local power needs can be covered in 3 years time
- Exploitation at full potential possible only after connecting the islands to main grid

## Elsewhere

- Geophysical & geochemical exploration necessary
- Followed by drilling exploration with 3 km deep wells
- First power plants after 5-7 years

*Thank you for your attention*
